About

I am Daniel Medina Cubero, a full-stack developer with over 5 years of experience building software independently and self-taught. My technical background spans web and mobile application development, automation, and artificial intelligence.

If you want to see what I am working on, take a look at my portfolio: danielmed.dev. My main stack is Python, but I adapt to any technology.

Aside from programming, I am a trumpet player with several years of experience. I enjoy snowboarding, padel, and karting, and I have a great passion for aviation. I aspire to become a pilot someday.
